GED Science – 50 Most Important & Frequently Appearing Questions

1. Identify the independent variable in an experiment testing plant growth with different fertilizers.
2. Identify the dependent variable in an experiment measuring temperature over time.
3. What is a control group and why is it important?
4. Which fertilizer produced the greatest plant height based on a given graph? (concept)
5. Which part of the cell produces energy?
6. What is the function of DNA?
7. Describe photosynthesis.
8. Compare photosynthesis and respiration.
9. What is natural selection?
10. Why do organisms with helpful traits survive better?
11. Identify producer, consumer, decomposer in a food chain.
12. How does energy flow in an ecosystem?
13. What is the main function of mitochondria?
14. What is a mutation?
15. How are traits inherited?
16. What is kinetic energy?
17. What is potential energy?
18. If force increases and mass stays constant, what happens to acceleration?
19. State Newton’s First Law.
20. State Newton’s Second Law.
21. Which has more kinetic energy: a 2 kg ball at 4 m/s or 1 kg ball at 7 m/s?
22. What is voltage?
23. What is current?
24. What is resistance?
25. Describe conduction, convection, radiation.
26. What causes seasons on Earth?

27. What causes climate change?

28. Identify evaporation, condensation, precipitation.

29. What is the greenhouse effect?

30. Explain the rock cycle.

31. What is a sedimentary rock?

32. What is an igneous rock?

33. What is metamorphism?

34. Identify an acid vs base on pH scale.

35. What is density?

36. Calculate density if mass = 20 g and volume = 4 cm^3.

37. What is the water cycle?

38. What is renewable energy?

39. What is nonrenewable energy?

40. Identify evidence of plate tectonics.

41. What causes earthquakes?

42. What causes tides?

43. What is gravity?

44. What does a line graph show better than a bar graph?

45. Interpret a pie chart showing population distribution. (concept)

46. What does it mean if a conclusion is unsupported by data?

47. What is the purpose of repeating a scientific experiment?

48. Identify a hypothesis.

49. Identify an example of a controlled variable.

50. Describe how to improve the reliability of an experiment.
